

Rohit Singh Rawat

Software Development Engineer

React Developer | Frontend Engineer | 4+ Years Experience (3.8 Yrs Full-Time)

Delhi, India | imrohit.150@gmail.com | 8700065727 | linkedin.com/in/imrohit150 | github.com/imrohit150

PROFESSIONAL SUMMARY

Software Development Engineer and **React Developer with 4+ years of experience** building production-grade **SaaS web and mobile applications**. Core frontend engineer on **Arka360** — a global solar platform serving **4,000+ installers across 27 countries** — where I engineered the end-to-end **Proposal Workflow system, Solar Calculator, Pricing & Financing modules**, and cross-platform mobile features. Proficient in **React.js (React 18/19), JavaScript (ES6+), TypeScript, Redux Toolkit, React Query**, and modern frontend architecture. Experienced in **responsive UI, REST API integration, performance optimization, i18n/localization**, and **Agile delivery** in fast-paced product teams.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS/SCSS
Frameworks: React.js (React 18/19), Next.js, Vue.js, React Native
React Skills: React Hooks, Custom Hooks, useState, useEffect, useContext, useMemo, useCallback, Component Lifecycle, SPA, React Router
State Mgmt: Redux, Redux Toolkit, Zustand, Context API
UI Libraries: Tailwind CSS, Shadcn/UI
Data Fetching: React Query, TanStack Query, Axios, Fetch API, REST APIs
Testing: Jest, React Testing Library
Tools: Vite, ESLint, Prettier, npm/yarn, Git, GitHub, Figma
Other: i18n / Localization, PDF Report Generation, Responsive Design, Cross-Browser Compatibility, Agile/Scrum
AI Tools: ChatGPT, Claude, GitHub Copilot, Windsurf

PROFESSIONAL EXPERIENCE

Software Development Engineer

Aug 2022 – Apr 2026

Indarka Energy Private Limited — Arka360 Platform

Promoted from Frontend Developer Intern (Feb 2022 – Aug 2022) | arka360.com | 4,000+ global installers | 27 countries

- Engineered the end-to-end **Proposal Workflow system** — Arka360's flagship feature — enabling solar installers to generate comprehensive **20-25 page downloadable PDF proposals** containing customer information, solar design data, pricing models, financial projections, and project details; built dynamic multi-step UI, real-time form validation, and automated **PDF report generation** using React.js, TypeScript, and Redux Toolkit
- Architected the Solar Calculator system** — the platform's primary estimation engine — with complex business logic, real-time energy calculation workflows, and automated report generation, serving as a core tool for 4,000+ global installers
- Built key product modules using **React.js, Redux Toolkit, and Zustand**:
 - Pricing & financing systems for solar cost calculations
 - Design defaults & project configuration workflows
 - Organization & inventory management features
 - Consumption and data-driven calculation logic
- Spearheaded **UI/UX revamp across major platform modules** — translated Figma designs into pixel-accurate, **responsive, cross-browser compatible** interfaces using Tailwind CSS and Shadcn/UI, significantly improving usability for global installer workflows
- Delivered **ArkaGo (React Native)** cross-platform mobile app contributions including **Organization Management screens, Lead Management workflows** (lead creation & detail pages), REST API integrations, and **i18n/localization** for multi-language support — app has 1K+ downloads on Play Store & App Store
- Optimized frontend performance through **lazy loading, code splitting, memoization (useMemo, useCallback)**, and API call reduction — delivering faster load times and smoother UX across the platform
- Built robust **REST API integrations using Axios and React Query** — implemented loading states, error boundaries, optimistic updates, and async data flow management across all platform modules
- Wrote **unit and component tests using Jest and React Testing Library**; reduced production bugs through rigorous edge-case handling and code review practices
- Collaborated with cross-functional **Agile/Scrum** teams of 4-6 frontend engineers; participated in sprint planning, code reviews, and iterative product delivery cycles
- Leveraged **AI-assisted development tools (ChatGPT, Claude, Windsurf, GitHub Copilot)** to accelerate feature delivery, improve debugging efficiency, and maintain high code quality

PROJECTS

Insurance Review Workbench [\[Live Link →\]](#)

Built a responsive operations dashboard for reviewing insurance enrollment submissions, featuring searchable queues, filtering, prioritization, detailed submission drawers, approval and correction workflows, and robust loading/error states. Implemented with React, TypeScript, TanStack Query, Axios, and a Node.js mock API; deployed on Vercel and Render.

Proposal Workflow & Solar Calculator — Arka360 [\[Live Calculator →\]](#)

Engineered Arka360's core Proposal Workflow enabling generation of 20-25 page PDF proposals with solar design, pricing, and financial data. Also built the Solar Calculator — the platform's primary estimation engine — serving 4,000+ global installers.

ArkaGo — React Native Mobile App [\[Play Store →\]](#)

Built Organization Management, Lead Management workflows, i18n/localization, and REST API integrations for this cross-platform field operations app. 1K+ downloads on Play Store & App Store.
