PROFESSIONAL SUMMARY

Software Development Engineer with **4+ years of professional experience** building scalable SaaS web and mobile applications, specialising in **React.js, JavaScript, and TypeScript**. Core frontend engineer on **Arka360** — a global solar platform serving **4,000+ installers across 27 countries** — where I engineered complex proposal workflows, solar calculators, and business-critical product modules. Expanded into full-stack development by independently building and deploying **SkillConnect**, a complete MERN application using **Next.js, Node.js, Express, MongoDB, and Socket.IO**. Experienced in frontend architecture, REST API integration, state management, and performance optimisation.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS
Frontend:	React.js, Next.js, Vue.js, React Native, Tailwind CSS, Shadcn/UI
State & Data:	Redux Toolkit, Zustand, Context API, TanStack React Query, Axios
Backend & DB:	Node.js, Express.js, MongoDB, Mongoose, Socket.IO, JWT Auth, REST APIs
Testing:	Jest, React Testing Library
Tools:	Git, GitHub, Vite, Figma, Cloudinary, Vercel, Render
Other:	Responsive Design, PDF Generation, i18n, Performance Optimisation, Agile/Scrum
AI Tools:	ChatGPT, Claude, GitHub Copilot, Windsurf

PROFESSIONAL EXPERIENCE

Software Development Engineer

Aug 2022 – Apr 2026

Indarka Energy Private Limited — Arka360 Platform

Promoted from Frontend Developer Intern (Feb 2022 – Aug 2022) | arka360.com | 4,000+ global installers | 27 countries

- **Engineered the end-to-end Proposal Workflow** — built an API-driven dynamic report engine assembling **20–25 page browser-rendered PDF proposals** with conditional page visibility based on the user's solar design and selected components; implemented **custom DOM-based pagination** using element height calculation and cloneNode for automatic page overflow, with final export via **html2canvas and html2pdf-ts**
- Built the **Solar Calculator** — a core platform estimation tool with interactive calculation interfaces, API integrations, and automated report generation, serving 4,000+ global installers **[Live →]**
- Developed business-critical product modules using **React.js, TypeScript, Redux Toolkit, and Zustand**:
  - Pricing & financing workflows and cost calculation systems
  - Design defaults, project configuration, and inventory management
  - Organisation management and data-driven consumption calculations
- Led a **progressive UI migration** — implemented feature-flag toggles to maintain legacy and redesigned interfaces simultaneously; restructured component data flows from prop-based patterns to **API-driven screens** with centralised state management, eliminating redundant API calls across the hybrid UI
- Contributed to **ArkaGo (React Native)** — organisation management, lead management workflows, REST API integrations, and i18n/localisation; **5K+ downloads** on Play Store & App Store **[Play Store →]**
- Optimised performance via lazy loading, code splitting, and memoisation; built REST API integrations with **Axios and React Query**; wrote component tests with **Jest and React Testing Library**; delivered features in **Agile/Scrum** sprints with a team of 4–6 engineers

PROJECTS

SkillConnect — Full-Stack Developer Networking Platform

[Live →] **[Frontend Repo →]** **[Backend Repo →]**

- Independently designed, built, and deployed a full-stack MERN networking app — **Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS, and Shadcn/UI** on the frontend; **Node.js, Express 5, MongoDB Atlas, and Mongoose** on the backend; deployed on Vercel and Render with separate repositories
- Implemented secure auth with **email OTP verification, JWT access/refresh tokens via HttpOnly cookies**, bcryptjs hashing, rate limiting, single-use password reset links, and session invalidation on password change; integrated **Cloudinary** for image uploads, **Brevo** for transactional email, and **Razorpay** for demo subscription payments with server-side signature verification
- Engineered **real-time private messaging with Socket.IO**, cursor-based message pagination, automatic reconnection, duplicate-message prevention, and live inbox updates; built developer discovery with search, experience-level filtering, connection management workflows, and responsive desktop/mobile layouts

Insurance Review Workbench **[Live →]**

- Built a responsive operations dashboard for reviewing insurance enrollment submissions — searchable queues, priority filtering, submission detail drawers, and approval/correction workflows; implemented with **React, TypeScript, TanStack React Query, and Axios** against a Node.js mock API, deployed on Vercel and Render
